

Hints for Accurate 1/4" Seams

Place a small strip of Dr. Scholl's Molefoam® padding next to your machine foot. Position a piece of 1/4" graph paper under the needle and place needle on a line 1/4" from edge. Line up Molefoam with edge of paper. Using 50 weight thread adds less bulk in the seam, which helps in accurate sewing.

To check for an accurate 1/4" seam, try this test: cut a 2 7/8" square. Cut it in half diagonally and resew. Press open. It should create a perfect 2 1/2" square. Adjust your seam line if it does not.
